Brief intro

I have worked and published papers in the fields of **geometry processing** (explicit / implicit representations, parameterization, mesh processing, geometric optimization, geometric deep learning) and **physics-based simulation** of all kinds of materials (solids, fluids, waves, cloth, hair, friction / contact, deformable bodies, plasticity, visco-elasto-plasticity, and fracture / damage). I am looking for **academic positions** where I can continue to explore mathematical models and solutions to problems arising in computer graphics and help PhD students grow.
